Magothy River Watershed - Stream Reach Priority for Restoration

Restoration Indicator Weights
- MPHI Rating: 31.6%
- Buffer Impacts: 15.8%
- Erosion Impacts: 5.3%
- Headcut Impacts: 5.3%
- Dump Site Impacts: 5.3%
- Other Infrastructure Impacts: 5.3%
- Potential of Emergency Road Crossings to Flood: 10.5%
- Contributory Percent Impervious to Stream Reach: 10.5%
- Rosgen Level I Classification

Legend:
- Buffer Sites
- Crossing Impacts
- Erosion Impacts
- Headcut Impacts
- Dump Site Impacts
- Other Impacts
- Potential of Emergency Road Crossings to Flood
- Contributory Percent Impervious to Stream Reach
- Rosgen Level I Classification

Note: The map above shows the locations of priority stream reaches within the Magothy River Watershed. The weights are based on various indicators such as MPHI Rating, Buffer Impacts, Erosion Impacts, Headcut Impacts, Dump Site Impacts, and Potential of Emergency Road Crossings to Flood. The Rosgen Level I Classification is also indicated for each reach.
